Ridhima Ranga (M/FMS/08/14)

Soumya Mishra (M/FMS/08/30)

Vijesh Baraskar (M/FMS/08/34)

Operation Breakdown :

- Attach pocket to front by setting pocket and stitching
- Attach yoke to back
- Attach front to the back
- Make collar – collar + band
- Attach collar to body
- Make sleeves – cuffs + sleeves
- Attach sleeves to body
- Side seam attachment
- Button hole making and stitching
- Washing and drying
- Button attachment
- Label attachments
- Finishing Operations

Bottle Necks

- Collar making and attachment is one of the critical operation, it takes more time due to interlining and number of stitches involved in it.
- Thread – if good quality of thread is not used than it will lead to more breakdown.
- Needle – if high quality of stainless steel is not used than it will lead to more breakdowns.
- Button hole and button stitching takes more time.
- Moving of semi-finished shirt from one sewing machine to another, from one operation to another takes more time.
- Worker being flooded with overload of work would not able to complete the operation.
- Improper tensions leads to puckering.

Suggestion

- Thread to be used should be 2 ply yarns with good strength.
- The needle used should be high strength steel.
- Tensioning device should be maintained and oiled properly.
- The temperature during should be maintained properly according to fabric.
- Fabric fastness properties should be considered before washing.
- Button should be attached after washing in order to make washing easy.
